

27 November 2017

**Rambler Intersects 102 Meters of 1.65% Copper
Including 35.8 Meters of 2.59% Copper,
Extending Mineralization 550 m Down-dip of Current Mineral Resource**

London, England - Newfoundland and Labrador, Canada – Rambler Metals and Mining plc (TSXV: RAB, AIM: RMM) (“Rambler” or “the Company”), a copper and gold producer, explorer, and developer is pleased to announce that the second hole in its surface exploration program has intersected significant Lower Footwall Zone mineralization 200 meters deeper than the previous drill hole.

EXPLORATION UPDATE

- The diamond drill hole was drilled from surface to a depth of 1686 meters, intersecting continuous Lower Footwall Zone mineralization grading 1.65% Copper (‘Cu’) over 102 meters
- Highlights from drill hole RM17-25b include:

Lower Footwall Zone (‘LFZ’)

102.0 meters of 1.65% Cu (From 1481.0m to 1583.0m)

Including 35.8 meters of 2.59% Cu (From 1481.0m to 1516.0m) and

Including 27.0 meters of 1.98 % Cu (From 1556.0m to 1583.0m)

- The mineralized intersections in RM17-25b lie approximately 200 meters down dip from the 40 meters of 1.42% Cu intersected in the previous hole, RM17-25a (see press release of September 14, 2017 and figure 1).
- The abundance of cross cutting, barren mafic dykes in the deeper LFZ intercepts of RM17-25b has declined relative to their abundance in the previous surface hole and in the current LFZ mining areas further up-dip. This decline in abundance of internal waste leads to the longer, continuous intercept at depth.

Norman Williams, President and CEO, commented:

“This latest Lower Footwall Zone intersection from the surface diamond drilling program is the thickest continuous LFZ mineralization discovered on the property to date. In the past, similar grades have been seen over narrower intervals, ranging from 40 to 70 meters, bounded by barren mafic dykes. In this latest hole, these barren mafic dykes occupy less than 10% of the drill core, allowing a much thicker mineralized area.”

“With holes RM17-25a and 25b we have now extended the LFZ an additional 550 meters down-dip beyond any previous drilling. We believe we have clearly demonstrated that the LFZ mineralization does indeed continue beyond our defined mineral reserves and increases in grade and thickness with depth. We look forward to continuing this surface drill program further in the New Year following an evaluation of the information collected to date.”

LOWER FOOTWALL ZONE SURFACE EXPLORATION

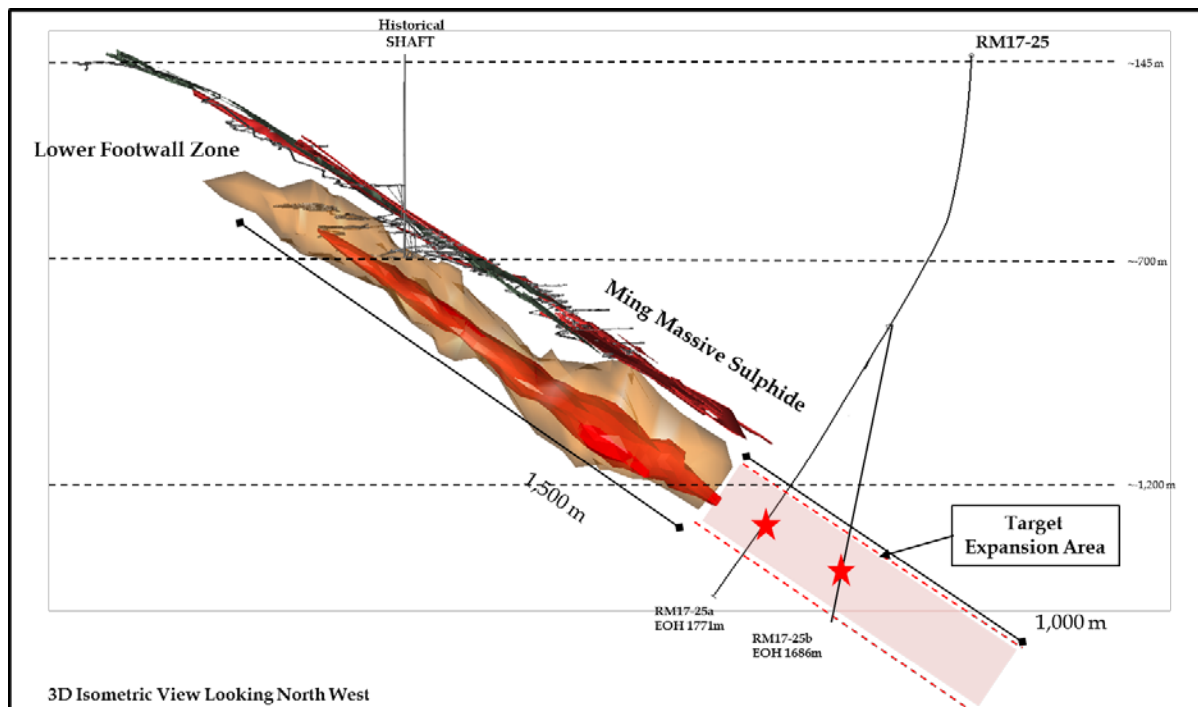

A directional surface drilling program was initiated in June 2017 to test the down plunge continuity of the Lower Footwall Zone and Ming South massive sulphide zone. The most recent hole, R17-25b, was turned off from the RM17-25a parent hole at a depth of 890 m utilizing Devico directional drilling. The hole penetrated the Upper Pacquet Harbour mafic sequence to a depth of 1379 meters, where it intersected the hanging wall/footwall horizon familiar in the Ming Mine. This horizon is the contact with the underlying Rambler rhyolite and is host to the deposit Rambler is currently mining, as well as the five other past producing ore bodies within the Rambler camp. Lower Footwall Zone chalcopyrite stringer mineralization was intersected below 1392 meters and was accompanied by increasing chlorite alteration. Grades returned from the entire LFZ encompassed 102.0 m of 1.65% Cu, including separate intercepts of 35.8 m of 2.59% Cu and 27.0 m of 1.98% Cu. The hole was completed to a total depth of 1686 meters.

Table 1 – Highlighted Significant Assay Results from RM17-25b

(See Note 1 and Appendix I below for further details)

Drill Hole	ZONE	From (m)	To (m)	Length (m)	Copper (%)	Gold (g/t)	Silver (g/t)	Zinc (%)
RM17-25b	LFZ	1481.00	1583.00	102.00	1.65	0.07	1.76	0.02
including	LFZ	1481.00	1516.77	35.77	2.59	0.12	2.71	0.03
including	LFZ	1530.00	1538.33	8.33	1.21	0.06	1.90	0.02
including	LFZ	1556.00	1583.00	27.00	1.98	0.07	2.05	0.01

Figure 1 – 3D Isometric of the Ming Mine with 2017 Surface Drill Holes

Note 1: Results reported are accurate and reflective as of the date of release. The Company performs regular auditing and reconciliation reviews on its processes following which past results may be adjusted to reflect any changes. Core lengths can vary depending on the angle the drill hole intersects the mineralized body. True widths are estimate to range between 90-95% of core lengths.

Larry Pilgrim, P.Geol., is the Qualified Person responsible for the technical content of this release and has reviewed and approved it accordingly. Mr. Pilgrim is an independent consultant contracted by Rambler Metals and Mining Canada Limited. Tonnes referenced are dry metric tonnes unless otherwise indicated.

Rambler maintains an ongoing quality assurance and quality control program ('QA/QC') to ensure that exploration data collected adheres to all compliance regulations and CIM best practices. Rambler maintains written field procedures and has had independent audit and verification geological database and all data related to drilling, surveying, sampling and assaying.

Rambler's QA/QC program includes insertion of blanks, duplicates and standard samples in regular intervals. Analytical control measures for the drilling program involve both internal and external laboratory check samples to ensure that data received and used are accurate and reliable. Rambler has integrated the database management program MX Deposit as an effective and efficient way to manage assay data as well as QA/QC tracking and reporting.

All core samples assayed and pertaining to this report were completed by Eastern Analytical Limited located at Springdale, Newfoundland. Eastern Analytical Limited is an ISO 17025 accredited laboratory and bears no relationship to the Rambler.

Neither TSX Venture Exchange nor its Regulation Service Provider (as that term is defined in the policies of the TSX Venture Exchange) accepts responsibility for the adequacy or accuracy of this release.

The information contained within this announcement is deemed by the Company to constitute inside information as stipulated under the Market Abuse Regulations (EU) No. 596/2014 ('MAR'). Upon the publication of this announcement via Regulatory Information Service ('RIS'), this inside information is now considered to be in the public domain.

ABOUT RAMBLER METALS AND MINING

Rambler is a mining and development company that in November 2012 brought its first mine into commercial production. Rambler has a 100 per cent ownership in the Ming Copper-Gold Mine, a fully operational base and precious metals processing facility and year round bulk storage and shipping facility; all located on the Baie Verte peninsula, Newfoundland and Labrador, Canada.

Rambler's ongoing Phase II plans are to increase mine and mill production to 1,250 mtpd by the fall 2017. This initial expansion has been fully funded through CEII Mining's investment. Rambler will also continue advancing Phase III engineering studies with a view to further increase production to 2,000 mtpd at the Ming Mine.

Along with the Ming Mine, Rambler also owns 100 per cent of the former producing Little Deer/Whales Back copper mines and has strategic investment in the former producing Hammerdown gold mine.

Rambler is dual listed in London under AIM:RMM and in Canada under TSX-V:RAB.

Caution Regarding Forward Looking Statements:

Certain information included in this press release, including information relating to future financial or operating performance and other statements that express the expectations of management or estimates of future performance constitute "forward-looking statements". Such forward-looking statements include, without limitation, statements regarding copper, gold and silver forecasts, the financial strength of the Company, estimates regarding timing of future development and production and statements concerning possible expansion opportunities for the Company. Where the Company expresses or implies an expectation or belief as to future events or results, such expectation or belief are based on assumptions made in good faith and believed to have a reasonable basis. Such assumptions include, without limitation, the price of and anticipated costs of recovery of, copper concentrate, gold and silver, the presence of and continuity of such minerals at modeled grades and values, the capacities of various machinery and equipment, the availability of personnel, machinery and equipment at estimated prices, mineral recovery rates, and others. However, forward-looking statements are subject to risks, uncertainties and other factors, which could cause actual results to differ materially from future results expressed, projected or implied by such forward-looking statements. Such risks include, but are not limited to, interpretation and implications of drilling and geophysical results; estimates regarding timing of future capital expenditures and costs towards profitable commercial operations. Other factors that could cause actual results, developments or events to differ materially from those anticipated include, among others, increases/decreases in production; volatility in metals prices and demand; currency fluctuations; cash operating margins; cash operating cost per pound sold; costs per ton of ore; variances in ore grade or recovery rates from those assumed in mining plans; reserves and/or resources; the ability to successfully integrate acquired assets; operational risks inherent in mining or development activities and legislative factors relating to prices, taxes, royalties, land use, title and permits, importing and exporting of minerals and environmental protection. Accordingly, undue reliance should not be placed on forward-looking statements and the forward-looking statements contained in this press release are expressly qualified in their entirety by this cautionary statement. The forward-looking statements contained herein are made as at the date hereof and the Company does not undertake any obligation to update publicly or revise any such forward-looking statements or any forward-looking statements contained in any other documents whether as a result of new information, future events or otherwise, except as required under applicable security law.

APPENDIX I – Assay listing for RM17-25b
