

Market Facts

as of June 2, 2008

TSX – Venture:	RAB
AIM – London:	RMM
Shares Issued:	59,725,000
Market Cap:	£10.8m
Share Price:	£0.18
52 week range:	£0.73 / £0.18

Gold deposits

Copper deposits

Rambler Metals and Mining was established to invest in the base metal sector in politically stable jurisdictions. Its principal project is the Rambler Cu-Au property, located on the Baie Verte Peninsula of Newfoundland and Labrador, Canada. Rambler has recently finished dewatering the old mine where ground conditions remained excellent, with minimal rehabilitation, throughout the entire dewatering program.

Pre-production development is currently ongoing while work continues on the detailed Engineering and business plan with an expected completion date of 1Q 2009. In conjunction an updated resource estimate is also expected to be released in 1Q 2009.

History

- The Rambler property contains the former producing Ming and Ming West Cu-Au mines.
- The Ming Mine last operated in 1982 and produced some 2.1 million tons of ore grading 3.5% Cu and 2.5 g/t Au over a 10 year operating life.
- The Ming West Mine operated between 1995 and 1996 producing 271,000 tons grading 4.0% Cu and 5.8 g/t Au.
- Mining ceased when workings reached a neighboring property boundary.

Recent Events

- In June 2008 the company completed a scoping study conducted by SRK Consulting and published its first NI43-101 resource for the property. It confirmed the Ming Mine can sustain a 4,000 mtpd production rate with a life of mine in excess of 10 years.
- In July 2008 the Ming Mine was fully dewatered while pre-production development to the 1807 Zone was started.
- In August 2008 the company hired a General Manager for the site which completes the operations management team necessary to bring the Mine into production.
- Exploration on the property is ongoing through delineation diamond drilling and geophysical surveys with continued excellent results being produced.

 ...and Gold Mining Company*

Board & Management

Harry Dobson – Chairman

- Chairman and Director of several exploration and mining companies including Rambler.
- Track record of successfully re-opening mines and creating significant shareholder returns.

George Ogilvie, P.Eng. – President & CEO

- A Mining Engineer with more than 19 years management, operating and technical experience in the mining industry.
- His career experience includes working for companies such as AngloGold, Anglo American, Dynatec Corporation and FNX Mining.

John S. Thomson, CA – CFO

- Chartered Accountant and graduate of INSEAD
- International career in business including working for companies such as PepsiCo.
- He is currently a non-executive director of Parragon Publishing Ltd

John Baker, QC – Director

- A senior partner in a leading St. John law firm and carries on an extensive and diverse mining, securities, and corporate/commercial practice. He has served on numerous public companies and volunteer boards and has received several awards for public service.

Jason McKenzie, CET – General Manager

- A Certified Mine Engineering Technician with over 35 years experience in underground mining at various ascending levels of supervision and management.

EXPLORATION HIGHLIGHTS

- Gold exploration proving positive.
- Titian 24 IP & MT survey recently completed over entire property.
- Experimental underground geophysics surveys.
- New surface drilling program to be planned based on this new information.

Gold Zone

- Within 50m to the already developed ramp and easily accessible with virtually no development costs.
- Use of 3D modeling techniques to determine the orientation and extent of the mineralization.
 - 8.7 m of 30.9 g/T Au, 2.14% Cu
 - 13.5 m of 3.7 g/T Au 0.58% Cu
 - 5.2 m of 6.7 g/T Au, 2.96% Cu
 - 2.6 m of 5.9 g/T Au, 2.30% Cu

Lower Footwall Stringer Zone (LFZ)

- Scoping study confirmed a low-cost, bulk underground profitable mining operation is viable.
- Continued underground delineation drilling with consistent good grades.
 - 37.2 m of 2.14% Cu
 - 19.5 m of 2.66% Cu
 - 26.8 m of 2.00% Cu
 - 7.5 m of 3.62% Cu
 - 17.4 m of 3.18% Cu

Upper Footwall Stringer Zone (UFZ)

- High grade chalcopyrite stringer zone approximately 50 meters from the existing underground development.
- Five holes have intersected the zone so far over a 400 meter plunge length and is open at depth.
 - 6.0 m of 14.6% Cu, 1.6 g/T Au
 - 14.4 m of 5.16% Cu, 0.5 g/T Au
 - 9.9 m of 3.51% Cu, 0.4 g/T Au

1807 Massive Sulphide Zone

- Now extends over a plunge length of 500 meters and is open both up-dip and down-dip.
- Drift development underway targeting the top of this zone.
 - 2.6 m of 17.65% Cu, 3.5 g/T Au
 - 2.6 m of 12.05% Cu, 5.9 g/T Au
 - 2.0 m of 13.62% Cu, 2.2 g/T Au
 - 3.4 m of 16.50% Cu, 3.3 g/T Au
 - 6.4 m of 10.82% Cu, 3.3 g/T Au
